Abstract (Basic): FR 2667854 A

The dispenser is of the type that uses a flow of paper from the inside of a bobbin (4). It has a body (1) that is fixed to a surface and a flat circular plate (3) which supports the bobbin. The band of paper is pulled through a central opening (3.1) in the plate.

A detachable cover (5) is fitted over the body. A casing (6, 25, 36) is arranged within a lower cavity (3.2) and this carries an automatic cutting mechanism within a helical envelope.

USE/ADVANTAGE - As a dispenser for hand towels tissue paper.

Prevents excessive wastage through regulating cutting mechanism.
